THE EMERGENCY

Historic flooding threatened a hospital network — and it couldn't afford to go dark.

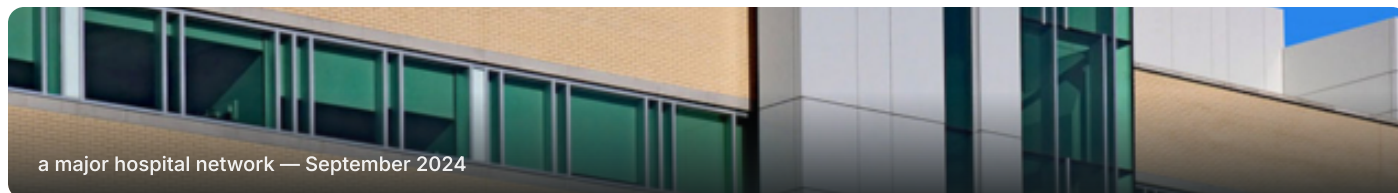

When Hurricane Helene's historic flooding bore down on a major hospital network, the system reached LDR through its **24/7 emergency hotline**. Keeping care running meant securing power and sanitation across every site before the storm's full impact arrived.

A hospital can't pause. Across **26 medical sites**, staff needed to keep treating flood injuries, storm-related accidents, and ongoing critical-care patients — all while the flood knocked out the power and water those same sites depend on.

The network needed commercial-grade power, sanitation, and supporting infrastructure delivered on a tight timeline, in a region where supplies were already short. They called LDR.

At a Glance

CLIENT	Major hospital network — 26 medical sites
INDUSTRY	Healthcare
SCENARIO	Hurricane Helene flooding — September 2024
SERVICES	Commercial generators · ADA restrooms & sanitation stations · Lighting · Fencing · Waste removal
OUTCOME	All 26 sites fully operational · zero downtime · ongoing contract

a major hospital network — September 2024

Power and sanitation to 26 sites — every request met, despite shortages.

Drawing on a nationwide network of equipment and personnel, LDR built and executed a support plan matched to the storm's projected impact — delivering power and sanitation to all 26 sites and fulfilling every request on a tight timeline despite regional supply constraints.

HOW CONTINUITY HELD

The call

24/7 hotline activation

The hospital system reached LDR's emergency line; a strategic support plan was built for the storm's projected impact.

Deployment

Power and sanitation to 26 sites

Commercial-grade generators, ADA restrooms and sanitation stations, lighting, fencing, and waste removal delivered despite regional shortages.

Through the flood

Zero downtime

Every site stayed operational — treating flood injuries, storm accidents, and ongoing critical-care patients.

After

Word traveled

Hospitals affected by Helene in Georgia and Florida requested the same response — and LDR fulfilled them too.

- ✓ **Commercial-grade generators** to maintain electricity across all 26 medical sites
- ✓ **ADA-compliant portable restrooms and sanitation stations** for hygiene, accessibility, and safety under emergency conditions
- ✓ **Lighting, fencing, and waste removal** to keep every site safe and functional
- ✓ **Every request fulfilled** on a tight timeline despite regional supply shortages
- ✓ **Full operational continuity** so staff could treat critical-care and storm-related patients without interruption

26 sites open, zero downtime, through historic flooding.

The hospital and all associated clinics stayed fully operational throughout the storm — treating flood injuries, storm-related accidents, and ongoing critical-care patients without interruption. Emergency healthcare access was preserved for a devastated community, and word traveled fast: hospitals across the Southeast asked for the same response, and LDR was awarded an **ongoing services contract**. Done.

What keeping 26 sites open teaches healthcare facilities teams

Healthcare can't wait for procurement

A 24/7 line and a pre-built plan mean power and sanitation arrive before the storm does — not after a vendor search.

Shortages are the test

A nationwide network fulfills every request on a tight timeline even when regional supply has run dry.

Continuity is the whole deliverable

Generators and restrooms aren't the goal; uninterrupted patient care through the flood is.

One plan across every site

Power, sanitation, lighting, fencing, and waste removal from one team means no site is left improvising.

Your sites can't go dark when the storm arrives.

Put commercial-grade power and sanitation on standby for every facility you run — before the next flood.
